

I CLAIM

1. A sock, in particular for use in athletic activities, characterized in that at least one climate channel (26) is provided in the tread area (13).
2. A sock according to Claim 1, characterized in that air channels (25) are provided on the inside of the leg and/or on the outside of the leg of the sock and are connected to at least one climate channel (26) in the tread area (13).
3. A sock according to Claim 1, characterized in that the climate channels (26) have a curved shape in the tread area (13).
4. A sock according to claim 2, characterized in that the climate channels (26) have a curved shape in the thread area (13).
5. A sock according to Claim 1, characterized that the climate channels (26) are partially tapered (261).
6. A sock according to Claim 1, characterized in that the climate channels (26) have an essentially circular cross section.
7. A sock according to Claim 1, characterized in that the climate channels (26) are connected to one another through a central channel (262).
8. A sock according to Claim 2, characterized in that air channels (25) and the climate channels (26) are made of the same material.
9. A sock according to Claims 2, characterized in that the air channel (25) is made of a climate-regulating mesh knit fabric.
10. A sock according to Claim 1, characterized in that the climate channel (26) is made of climate-regulating mesh knit fabric.

11. A sock according to Claim 1, characterized in that the sock is equipped with an X-cross bandage (24).
12. A sock according to of Claim 1, characterized in that the sock has padding (22, 23).
13. A sock according to Claim 2, characterized in that the climate channels (26) are partially tapered (261).
14. A sock according to Claim 3, characterized in that the climate channels (26) are partially tapered (261).
15. A sock according to Claim 2, characterized in that the climate channels (26) have an essentially circular cross section.
16. A sock according to Claim 3, characterized in that the climate channels (26) have an essentially circular cross section.
17. A sock according to Claim 5, characterized in that the climate channels (26) have an essentially circular cross section.
18. A sock according to Claim 2, characterized in that the climate channels (26) are connected to one another through a central channel (262).
19. A sock according to Claim 3, characterized in that the climate channels (26) are connected to one another through a central channel (262).
20. A sock according to Claim 4, characterized in that the climate channels (26) are connected to one another through a central channel (262).
